

DRISHTI SAT-SA — System architecture

Offline · after the CSE SIEM · not a SOC

SYSTEM BOUNDARY

IN: CSE extract only (alerts, cases, assets, analysts, playbooks — metadata, no pcaps / PII / raw logs). OUT OF SCOPE: CSE SOC floor, real-time monitoring, SIEM replacement, multi-tenant SOC, national sensor grid, cloud LLM.

FIGURE 1 · Six-layer pipeline (data flows upward to the examiner)

SUPERVISOR CONSOLE (static SPA)

- Dashboard · Entity Radar · Peer
- Review Queue · Negative Space
- Trust & Audit · Validate · Advisory
- Relative /api/* · no CDN · no npm
- Air-gap badge · INTRANET ONLY

HUMAN IN THE LOOP

Examiner Accept / Reject / False Positive on every Top-100 row. The tool says WORTH CHECKING, never GUILTY. Decisions write back onto the SHA3 chain.

ACCEPTREJECTFP

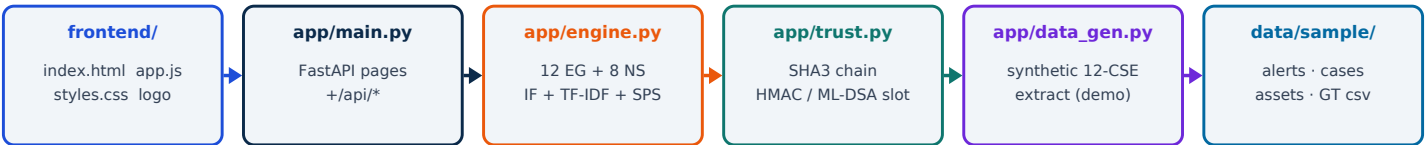

RUNTIME (demo hardware)

Language	Python 3.11
API / UI	FastAPI + static HTML/CSS/JS
Data / ML	pandas, NumPy, scikit-learn
Trust	SHA3-256 live; ML-DSA-65 slot
Package	Docker --network=none
Compute	4 vCPU · 16 GB · 100 GB · no GPU

FIGURE 1b · System context (DRISHTI is after the SIEM)

FIGURE 2 · Deployment components (one box, air-gapped)

Dual engine, scoring, trust chain

FIGURE 3 · Dual engine (PS §3) — rules fire first; ML is an extra flag

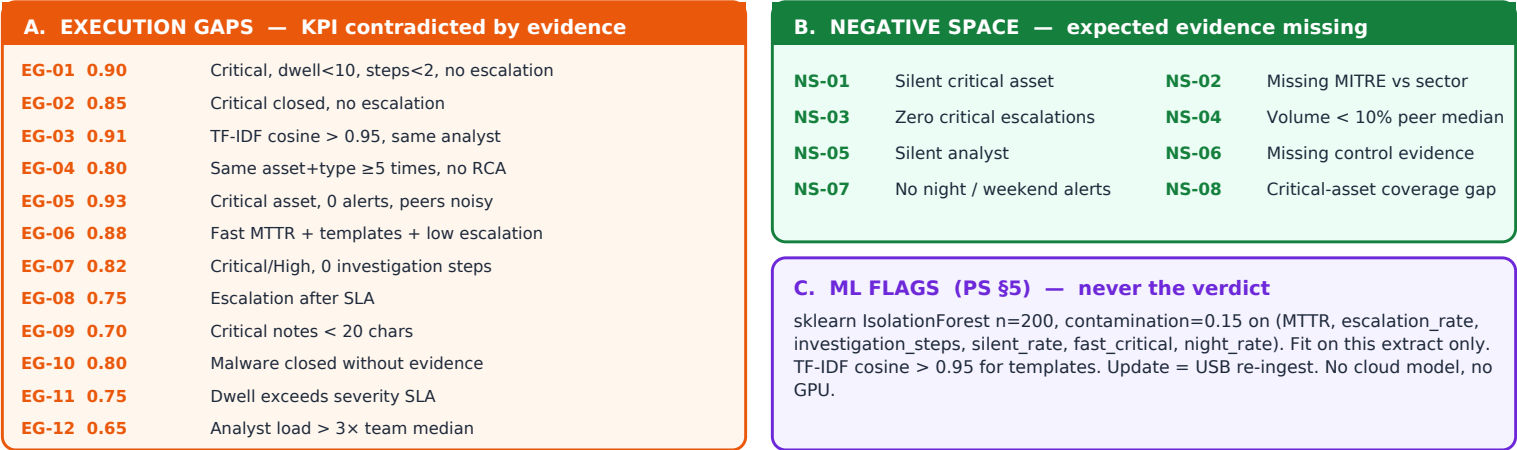

FIGURE 4 · Finding → Trinity → SHA3-256 chain → examiner seal
